

Hyperpigmentation facial:

This facial combats free radical damage and reduces the synthesis of melanin.

Back rejuvenation:

The treatment includes cleanser, toner, exfoliant mask, and light massage (which promotes relaxation, increases circulation, metabolism and product penetration).

Make-up after Surgery:

Dermablend® corrective makeup products provide the most complete, natural-looking coverage for face and body skin color imperfections, such as uneven skin tone, freckles, post surgical redness, scarr, bruising, port wine stain, rosacea, vitiligo, varicose veins, acne scarring, burns, age spots, strawberry marks, chemical peels, black eyes, blemishes, stretch marks, freckles, shiny skin and birthmarks.

Skin is the largest organ in the body. It is a strong, waterproof barrier designed to protect us from the outside element. Skin layers, nerves, hair follicles, and glands all work together harmoniously to regulate and protect the body. Healthy skin is moist, soft, smooth and mildly acidic. An esthetician is someone who specializes in the health of the skin, someone who helps your skin assume a natural glow.

Our special treatments include:

Seaweed Facial:

Seaweed facials detoxify and nourish the skin. They begin with gentle cleansing followed by a soothing massage with seaweed serum. The serum is rich in vitamin C, minerals and proteins. It ends with the cooling sensation of the seaweed mask. The seaweed facial enables the skin to build its own natural supply of moisture. The mild and relaxing aroma will renew and soothe your skin and spirit!

Deep pore cleansing:

The deep pore cleansing treatment will remove the blockade of hair follicles. Hair follicles, ever present on the skin (except for the palms and soles), provide oily secretions to protect the skin and hair. The follicles (pores) can be blocked by hormone driven secretions leading to disruption of the delicate seal on the skin's surface. These oily secretions become extremely irritating in the presence of fluorescent bacteria (propionobacteria acnes). Acne forms in a reaction between the irritating bacterial oils and the inner side of the skin. Pores are opened with steam to emulsify dried oils. Oxidized oils are then extracted manually. The skin is finished with a pore refining mask. Deeper cystic acne may be treated with vitamins, antibiotics, photodynamic therapy and chemical peels.

Hydration facial :

Is is ideal for sensitive and dry skin. It replenishes lost moisture and makes your skin looks healthier.

Vitamin facial:

It stimulates and strengthens the capillary blood vessels structures. Recomendded for sensitive skin.

Anti - acne facial:

This treatment of acne and oily skin helps regulate sebum metabolism, tighten pores and reduce marks due to acne by using this product with zinc, tea tree oil, and willow leaves.

Sensitive skin facial:

The product contains azuline, a calming ingredient extracted from camomile and vitamin C. Azuline combats free radicals and stimulates collagen synthesis.

Anti - aging facial:

This treatments is using mask to firm and tighten skin, which contain protein fibers of Aosa.
